

DWA_03.5 Knowledge Check_DWA3.2

1. User story(ies) in Gherkin syntax for the **+** button.

As a user, I want to be able to increment the counter by one with a single click, so that I can keep track of the occurrences of an event.

As a user, I want the “**+**” button to be disabled when the counter is at 15, so that the user is limited on the number of click to prevent clicking forever

As a user, I want the counter to update in real-time when I click the “**+**” button, so that I can see the updated count immediately.

2. User story(ies) in Gherkin syntax for the “**-**” button.

As a user, I want to be able to decrement the counter by one with a single click, in case I need to correct a count or undo an increment.

As a user, I want the “**-**” button to be disabled when the counter is at -5, so that the user is limited on the number of click to prevent clicking forever

As a user, I want the counter to update in real-time when I click the “**-**” button, so that I can see the updated count immediately.
